

DAVID YUNTA SOFTWARE DEVELOPER

✉ david.yunta.aller@gmail.com ☎ +34 679266009 🔗 linkedin.com/in/davidyunta/ 🐙 github.com/viodid

PROFILE

Software Engineer specializing in developer platforms, automated infrastructure, and scalable Python backend systems. Experienced in building internal developer tooling and optimizing CI/CD workflows for large engineering organizations. Proficient in Python, Go, and C++, with a strong foundation in low-level systems, algorithms, and automated pipeline design. Passionate about designing scalable, production-grade systems and delivering clean, maintainable code to solve complex engineering challenges.

EXPERIENCE

Nunegal Consulting (Client: Zara Group / Inditex), Software Developer - Technical Ownership & Architecture: Headed the technical design and development of an internal Agentic AI Platform for infrastructure automation, guiding and coordinating a team of 3 engineers through execution. - Full-Stack Development: Built a full-stack autonomous DevOps agent (FastAPI/Python, React) capable of inspecting workspaces, editing files, and executing code natively. - AI Orchestration: Implemented an Agentic Workflow utilizing a Tool-use/Model Context Protocol (MCP) approach to orchestrate complex tasks, including generating Infrastructure as Code (IaC), validating configurations, and automating Git operations. - System Integration: Engineered robust backend integrations with multiple LLM providers and Inditex's core Data DevOps platform, centralizing infrastructure operations for over 100 engineers. - Impact: Reduced the Data DevOps team's manual workload by 80% while successfully scaling the platform to handle hundreds of concurrent requests reliably.	04/2024 – Present
VML The Cocktail (Client: Zara Group / Inditex), DevOps - Backend & CI/CD: Engineered reusable CI/CD pipeline modules using Python and Go for backend services, streamlining large-scale cloud data operations and accelerating deployment cycles. - Automation: Automated interactive Databricks cluster deployments by establishing custom deployment policies, significantly reducing operational friction for the Analytics team and accelerating data processing workflows	11/2023 – 04/2024
VML The Cocktail, DevOps Intern - GenAI Integration: Architected Generative AI Proofs of Concept (PoCs) utilizing OpenAI, LangChain, and Whisper; developed a batch transcription pipeline for a call center capable of processing thousands of calls, alongside semantic web search engines and conversational chatbots. - Business Impact: Demonstrated AI capabilities to executive stakeholders, directly driving the commercialization and continued funding of multiple PoCs.	01/2023 – 11/2023

EDUCATION & RELEVANT PROJECTS

Software Engineering Program, 42 School - Low-Level Systems: Completed rigorous projects in C and C++, focusing on memory management, network sockets, process multiplexing, and concurrent system designs. - Custom Build & Compile Pipelines: Built webserv [🔗] (a multi-client, non-blocking HTTP server in C++98) and minishell [🔗] (a Unix shell interpreter in C) from scratch. - Build Graph Management: Wrote complex Makefiles to manage dependency graphs, avoid unnecessary relinking, handle multi-stage compilation rules, and configure local automated test suites. - CLRS Exercises: Implemented algorithmic solutions and data structures in Python to solve classic computer science problems (CLRS).	2022 – 2025 Madrid
--	-----------------------

SKILLS

Python, C++, Go, JavaScript, FastAPI, Django, Flask, React, LangChain, PostgreSQL, MongoDB, Milvus, Qdrant, InfluxDB, Azure (AKS, Container Apps, Azure Functions), AWS, Terraform, k8s, GitHub Actions, Azure DevOps, OTel

CERTIFICATES

Microsoft Certified: Azure Administrator Associate (AZ-104) [🔗]

COURSES

CS50w Web Programming with Python and JavaScript [🔗] , CS50	01/2022 – 08/2023
CS50x Introduction to Computer Science [🔗] , CS50	09/2020 – 12/2021
